

Revolutionizing menopause care and shaping the future of women's longevity

Hebe
Tech

AI-driven diagnostic tool for menopausal transition

An algorithm-based tool to shed light on physiological changes and to predict the onset of menopause

Our team has a unique position to see the whole health journey from presenting symptoms, to diagnosis, to treatment, to outcome and access to large volume of data

Primary health physicians do not have the knowledge or tools to help women with menopausal transition/hormonal-related issues. If the diagnosis and treatment were rightly timed in primary health care, we could change the trajectory of female health

HebeTech will revolutionize menopause care and empower women with the insights they need to take control of their health
