

Educaite – The AI Learning Assistant for Swiss Schools

Empowering students to think,
not just to answer.

Educaite – The AI Learning Assistant for Swiss Schools

Learning should empower curiosity, not just repetition. Educaite is an adaptive AI assistant built on Swiss technology (Apertus by ETH Zürich), designed to support students and teachers through personalized learning journeys aligned with Lehrplan 21.

Our platform **analyses learning progress**, identifies strengths and weaknesses, and provides **tailored exercises, feedback, and gamified challenges** – all in a secure, **Swiss-hosted environment**. Thanks to precise and optimized AI queries, Educaite also operates with a significantly lower ecological footprint compared to other AI tools, reducing unnecessary computational load while keeping data local and efficient.

Our mission

To bring ethical, transparent, and sustainable AI into every Swiss classroom.

Our vision

A generation of students who think critically, learn independently, and grow confidently in a digital world.
