Simplify Your Patent Journey with Innovation Guard

Al-powered Legal Insights for Swiss SMEs, Startups, and Innovator

Navigating the patent application process has never been easier. InnovationGuard is a cutting-edge legal platform that empowers Swiss SMEs, startup founders, and individuals to seamlessly protect their innovations with the help of advanced Altechnology.

Personalized Legal Insights

Get expert guidance at every step of your patent filing.

Tailored Documents

Create patentrelated paperwork effortlessly with customizable templates.

Interactive Checklists

Stay on track and ensure all requirements are met.

Real-time Risk Updates

Stay ahead with updates on potential risks during the application process.

Potential Market Value Evaluation System

Assess the economic potential of your innovation with Al-driven market insights.

Innovation**Guard** combines all these tools into one user-friendly platform, making patent filings efficient, reliable, and secure.

Start Simplifying Your Patent Process Today!

Unlocking the full value of scientific experiments

LabDeep

Our AI-based platform brings unpublished, high-quality experiments to light, improving research efficiency, cutting R&D costs, and accelerating innovation in life sciences.

LabDeep innovates in three key areas:

Data collection

Submission in less than one hour with our Al-guided platform. Earn rewards or access for your contributions.

Data curation

The future of quality control: Al checks for accuracy, authenticity, and reusability. Say goodbye to peer review bottlenecks.

Data presentation

Your AI research companion is here. Discover precise evidence, no matter how specific, and interact seamlessly using natural language.

Team: Catharina Sänger, Natalja Travanov, Enea Motta, Negin Ghamsarian, Farrokh Tarpoudi Baheri

Compliance Copilot

Streamline compliance workflows with AI driven automation. Reduce risks.

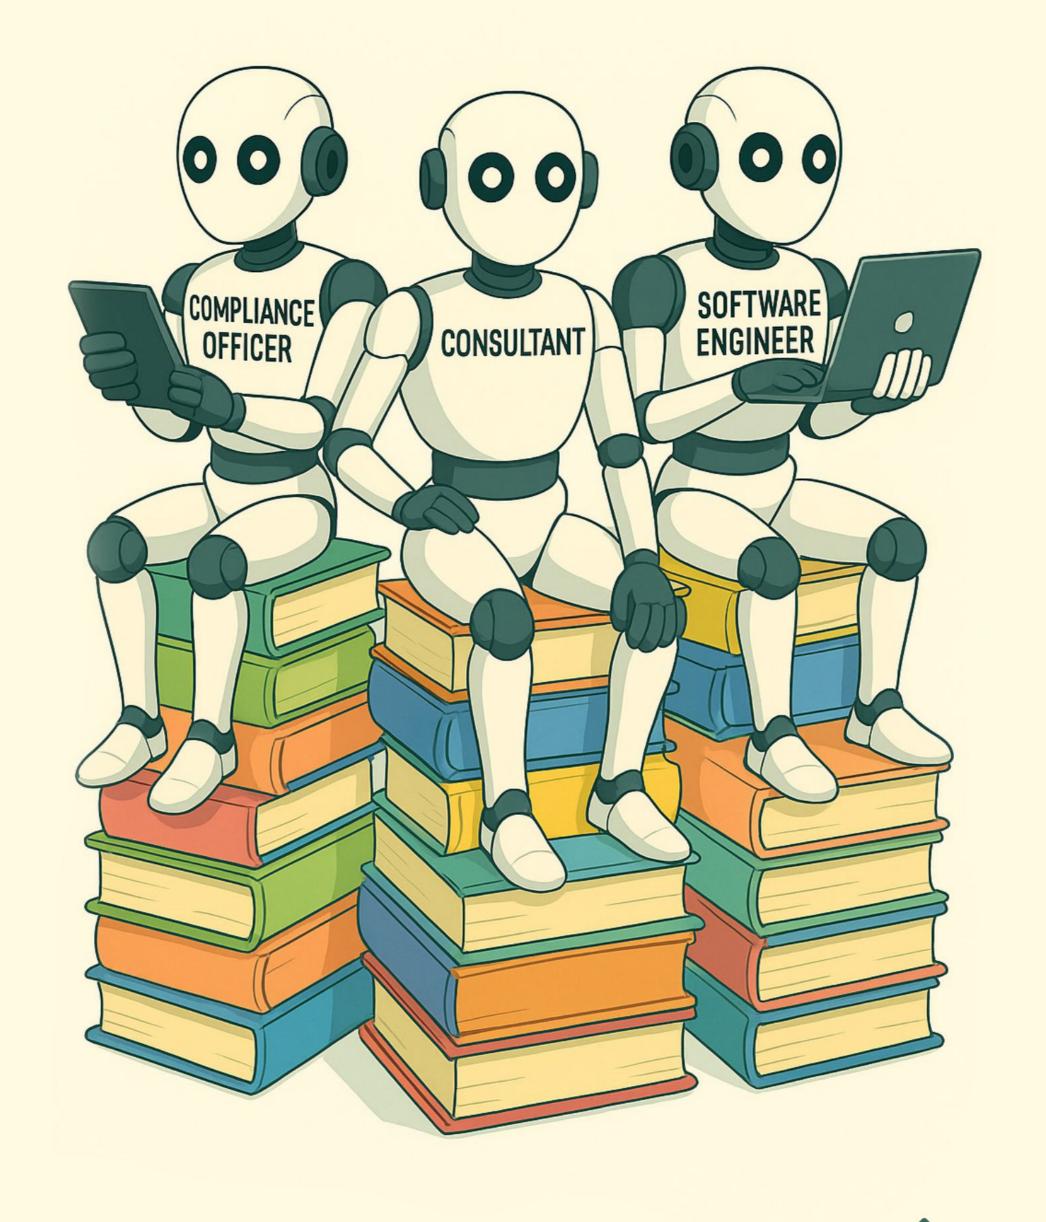

Cost-effective delivery

AI reduces operational expenses by automating tasks and optimizing resource allocation

High robustness

AI-driven automation improves system reliability by reducing errors.

Automated compliance updates

They ensure real-time adjustments to regulatory changes, minimizing compliance risks

Faster delivery times Streamlining workflows

allows for quicker execution and more efficient service delivery

Higher satisfaction rate

AI-driven optimizations enhance user experience by providing faster and more accurate solutions

Scalability & adaptability

AI agents enable seamless growth by flexibly adapting to changing business needs

We believe compliance is a long-standing industry challenge, but when done right, it builds customer trust and strengthens the talent pool

PRMA genetics

Faster Genetic Insights, Better Emergency Care

PRIMA genetics brings **precision medicine** to the **frontline**-delivering **fast genetic insights when time matters most**, starting with stroke care.

The Problem

Precision medicine is too slow in emergencies. Rapid genetic testing isn't available when it's most needed.

The Immediate Need

Stroke is a leading killer.
A common drug fails in 30% of patients due to patient genetic profile, raising the risk of recurrent strokes

Why It Matters: In Switzerland:

•20K strokes/year•CHF 4.2 B cost

PRIMA genetics would save CHF 63M in greater Zurich area as a start.

PRIMA genetics: **fast, accurate** and **affordable** platform can expand to cardiovascular diseases and beyond - setting a new standard in **precision medicine where it matters most.**

COSMOPs

Automated Development and Testing for Intelligent systems

COSMOPs is a platform that helps robotics, automotive, and aviation companies automate the development of autonomous systems, reducing costs by up to 50-75% and minimizing safety risks.

COSMOPs provides to Robotics, automotive, and aviation (and any cyberphysical systems - CPS) companies with development solutions that

automate training, development, testing, and deployment of intelligent systems such as autonomous vehicles (drones, self-driving cars, etc.),

lower prices when selling the systems for their services,

allow quicker feedback loops, fast delivery of system updates to customers,

allow reduced development costs, effective testing in realistic scenarios, to avoid problems in the real world

The Target is to make intelligent systems, such as autonomous vehicles, safer and more reliable than human abilities.

Accelerating Circular Construction

Reusing building materials: faster, cheaper, and more sustainable

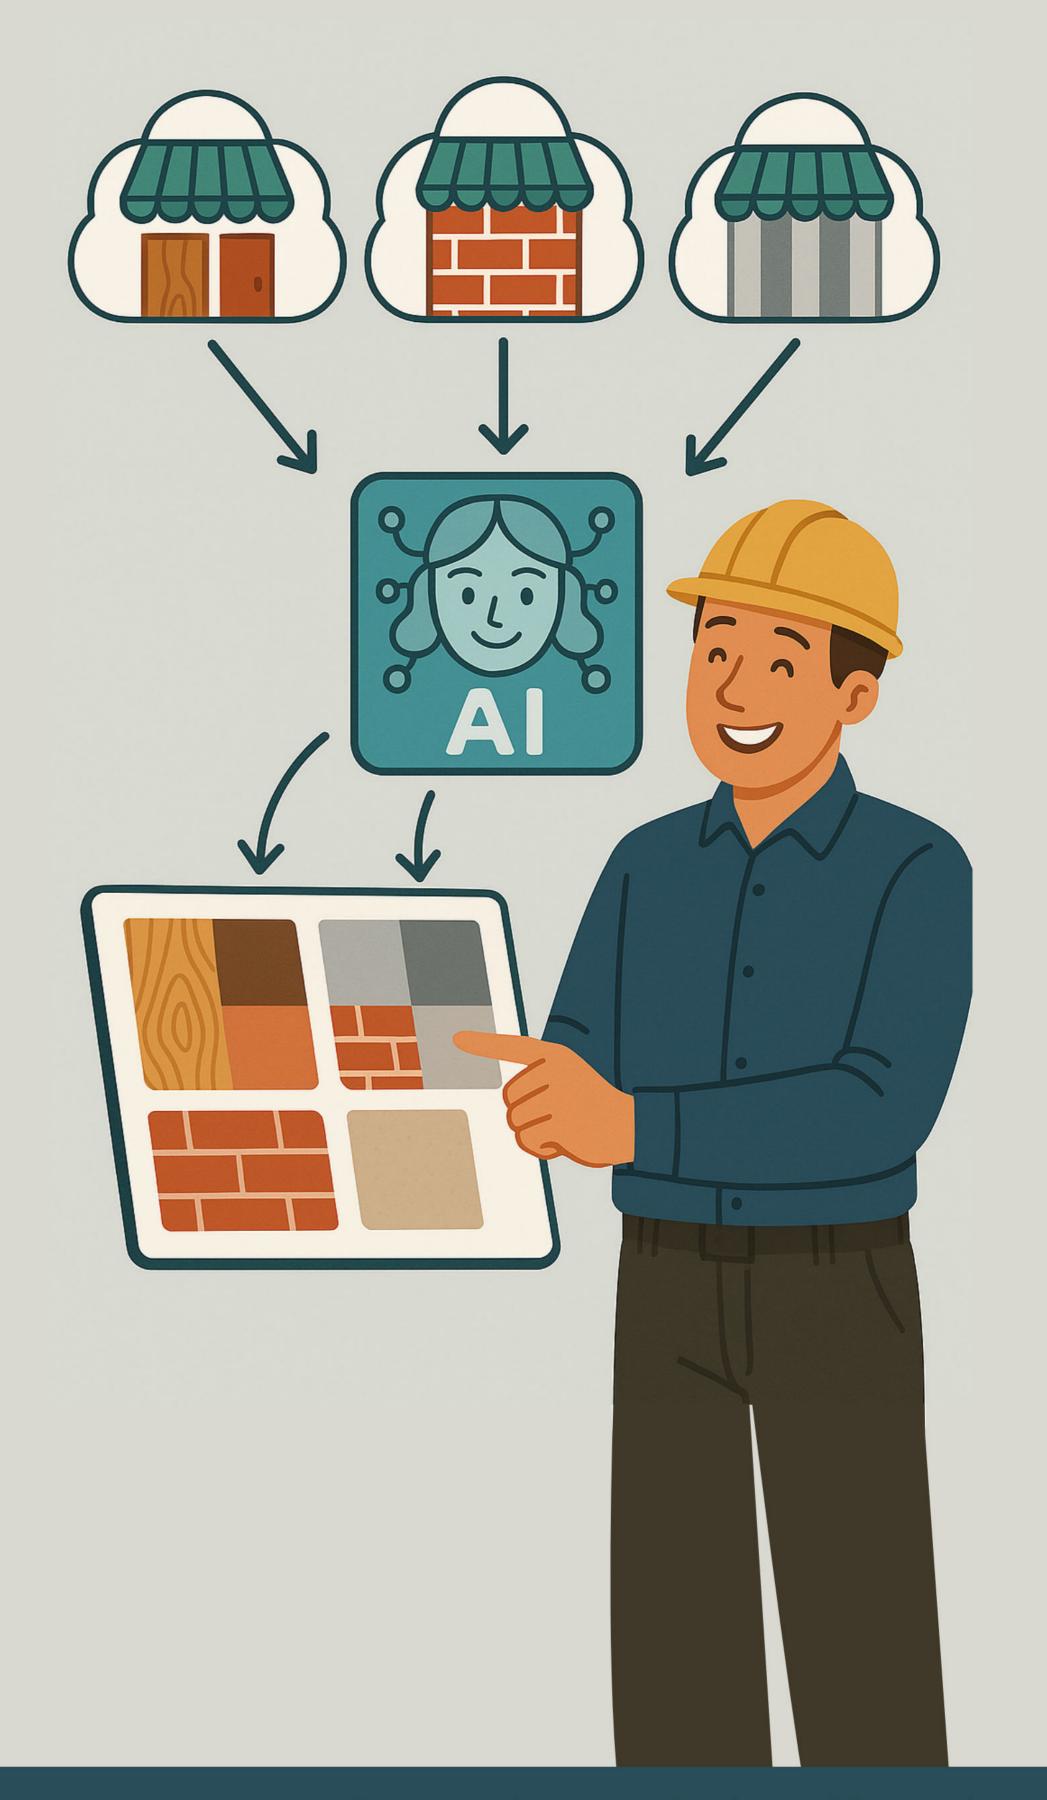

Annually, about 75,000 tons of reusable materials worth around 40 million Swiss Francs are generated from prematurely demolished buildings.

Switzerland is enacting legislation to promote eco-friendly and recycled building materials, requiring buildings to be dismantled for material reuse, thus supporting the circular economy and reducing environmental impact.

ReBuo aids architects and building owners by providing insights into reusable building materials from buildings to the materials from online marketplaces, streamlining the process and reducing costs, as well as CO2 emissions.

Ceramic Star Particles for Skin therapies

We help MedTech companies improving medicine efficiency for patients at low cost

Problem

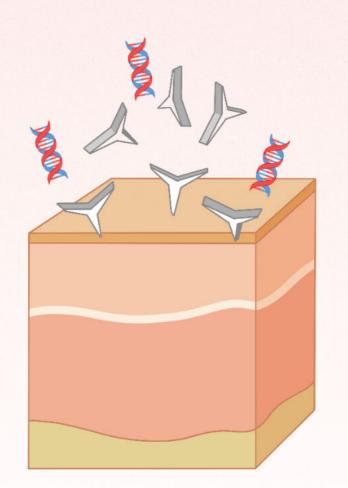

The medicine for skin affections are expensive

The medicine cannot penetrate deep the skin (low efficiency)

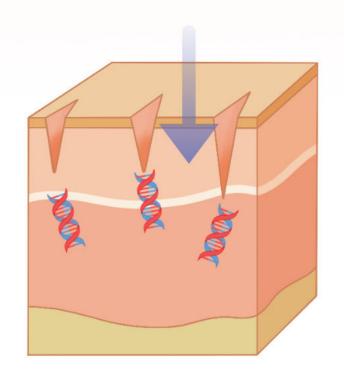

Solution

- → Ceramic star particles create micropuncture (no pain for patients)
- Better diffusion of the medicine & better treatment efficiency
- → Suitable for many different skin affections
- Compatible for cosmetic industry

Time-saving: about 15.000 ceramic stars at once

Re-usable material

Suitable for mass production

Energysaving

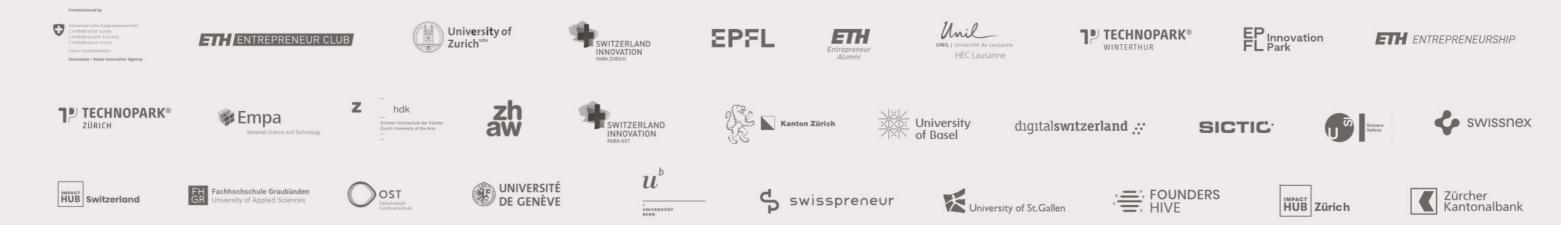

Low cost

ETH ENTREPRENEURSHIP

A New Era for Rare Disease Diagnosis

Every Patient Counts

Genorare leverages LLM, predictive analytics, and Fully Homomorphic Encryption to deliver fast, secure, and accurate insights while protecting patient privacy. With privacy at its core, Genorare ensures full GDPR and HIPAA compliance, allowing seamless adoption in hospitals, research institutions, and pharmaceutical companies.

Our mission is simple: shorten the diagnostic journey and give patients the answers they deserve—faster and more securely. Because at Genorare, every patient counts.

Real-Time Diagnosis Support

Our advanced predictive

intelligence
analyzes genomic & EHR data to
assist doctors in identifying rare
diseases earlier. Privacy-First AI –
Using FHE & blockchain,
Genorare analyzes encrypted
data without ever exposing raw
patient information, ensuring
GDPR & HIPAA compliance.

Seamless EHR & Genomics Integration

Works within **existing hospital** systems for automated, background analysis without disrupting workflows.

Clinical Trial Matching

Connects rare disease patients with pharma & biotech trials, ccelerating orphan drug evelopment.

Patient-Doctor Matching

Helps patients find specialized care faster, reducing the diagnostic odyssey. It also enables doctors to collaborate, solving the puzzle of rare diseases together and uncovering the right diagnosis through shared expertise.
